

The Total Summer School is intended for students in their second last or last year at the top schools, universities and educational institutions in our main partner countries.

Participants will focus on five key issues and challenges facing international oil and chemical companies:

- Economic: Is the global tension between energy supply and demand here to stay?
- Geopolitical: What are the main causes of uncertainty and tension and how can they be alleviated?
- Energy diversification: Are there credible, competitive alternatives to finite resources, in particular in the transportation segment?
- Environment: What strategies can be deployed to combat global warming?
- Social and managerial responsibility: How can our ethical and managerial values be made compatible with the wide diversity of countries, people and situations?

These topics will be addressed at round tables and in presentations and workshops.

In smaller workshops, students will be able to contribute actively to the program, share ideas, express their views and ask questions about the main topics of the seminar

This classroom approach will be supported by a visit to a Total industrial facility in France.

During the summer school, students will be able to take advantage of cultural opportunities in nearby Paris and [Versailles](#).

The Total Corporate University and the Total subsidiaries taking part in the Summer School are financing transportation, accommodation and meals for the participating students.

A detailed program will be sent to the successful applicants in spring 2008.
